Installation &
Commissioning Services
Technical Consultancy
Maintenance & Warranty
Services

Gentoo Sunderland Limited

Gentoo had a requirement to provide IP connectivity to a number of buildings within the Sunderland area for traditional data, CCTV imagery and emergency 'panic button' traffic, between sites and to a central monitoring station.

Given the importance of these requirements the provision of an always-on, reliable network was paramount. The cost for connecting these sites together using traditional leased line technology was hugely expensive, and would provide a network which was simply leased and never owned.

Boston Networks designed and installed a wireless network which provides high speed point to point connectivity throughout Sunderland utilising a series of high rise flats and strategic base stations.

The result has been the delivery of a carrier-class always-on network supported by a personalised Boston Networks maintenance & support contract.

The client now enjoys the benefits of a rapid return on investment, in addition to full ownership of the high speed 'Wireless WAN'.
