Press Release - Boston Networks Install 14,000 Information Outlets At The University Of Edinburgh

Glasgow, Scotland, February 2008 -- Boston Networks have recently completed the installation of a site wide containment system and distribution of a Category 6 cabling infrastructure to 14,000 RJ45 information outlets offering connectivity for data, voice, video & intelligent building systems.

The copper cabling system is supported by a leading edge 'Laser Optimized' blown fibre optic cabling solution providing connectivity to the desk, between the 70+ communications closets and to the UK Education & Research Network 'JANET'.

Informatics is critical to the future development of science, technology and society. In the age of information, computing technology is changing the ways we work and play. Informatics is changing the way we think.

The school brings together research in Computer Science, Cognitive Science, Computational Linguistics and Artificial Intelligence. It provides a fertile environment for a wide range of interdisciplinary studies, leading to this new science of 'Informatics'.

Boston Networks are currently installing a leading edge network cabling infrastructure throughout the new build landmark in the centre of the University's main campus.

Boston Networks Ltd Account Manager, Paul Goodbrand, said "winning a large cabling infrastructure installation project at Edinburgh University takes a lot of dedicated design effort. In conjunction with the manufacturer and the client we were able to demonstrate the superior commercial competitiveness of our solution to the main contractor."

Network cabling systems from Boston Networks allow our customers to focus on their business operations whilst we provide excellence in designing, installing and maintaining your data network. Reduced cost of ownership, integration of services onto a common communications platform and superior performance and reliability allow our customers to grasp the benefits of evolving IT strategies in the knowledge that the building network will grow with their business.

The success in securing this contract is one of many projects that Boston Networks Ltd undertake throughout the UK every year. Full case studies and project details are available for this and other successful network deployments on request.
